In this talk, "Set Theory" means ZFC. Objects are sets. Language is  $\langle =, \in \rangle$ . Other relations and operations are derived;  $\subset, \cap, \cup, \mathcal{P}(\cdot), \emptyset, \ldots$ 

- コン・4回シュービン・4回シューレー

In this talk, "Set Theory" means ZFC. Objects are sets. Language is  $\langle =, \in \rangle$ . Other relations and operations are derived;  $\subset, \cap, \cup, \mathcal{P}(\cdot), \emptyset, \ldots$ 

Axioms:

1. Extensionality  $\forall x \forall y (\forall z (z \in x \Leftrightarrow z \in y) \Leftrightarrow x = y)$ 2. ...

Infinitely many axioms, recursive system.

In this talk, "Set Theory" means ZFC. Objects are sets. Language is  $\langle =, \in \rangle$ . Other relations and operations are derived;  $\subset, \cap, \cup, \mathcal{P}(\cdot), \emptyset, \ldots$ 

Axioms:

1. Extensionality  $\forall x \forall y (\forall z (z \in x \Leftrightarrow z \in y) \Leftrightarrow x = y)$ 2. ...

Infinitely many axioms, recursive system.

Things provable in ZFC:

• If  $2^{\aleph_n} < \aleph_{\omega}$  for all  $n \in \omega$ , then  $2^{\aleph_{\omega}} < \aleph_{\omega_4}$  (Shelah 94),

- ► There exists an L-space (Moore 05),
- $\mathfrak{t} = \mathfrak{p}$  (Malliaris-Shelah 13),

▶ ...

### Continuum Hypothesis – CH

$$(|\mathbb{R}|=) |2^{\omega}|=leph_1$$

◆□▶ ◆□▶ ◆ □▶ ◆ □▶ ● □ ● ● ● ●

### Continuum Hypothesis – CH

# $(|\mathbb{R}|=) |2^{\omega}| = \aleph_1$

Defined by Cantor in 1878. Cantor believed it is true. One of Hilbert's 23 problems (1900). Gödel (1940) shows it cannot be disproved (if ZFC consistent). Cohen (1963) shows it is independent of ZFC, invented *forcing*.

How to show given sentence  $\varphi$  is independent of ZFC?

How to show given sentence  $\varphi$  is independent of ZFC?

Assume ZFC is consistent, demonstrate that  $ZFC + \varphi$  is also consistent.

Given a model (universe of sets) V of ZFC, modify V so that it satisfies  $ZFC + \varphi$ .

How to show given sentence  $\varphi$  is independent of ZFC?

Assume ZFC is consistent, demonstrate that  $ZFC + \varphi$  is also consistent.

Given a model (universe of sets) V of ZFC, modify V so that it satisfies  $ZFC + \varphi$ .

Idea 1: Remove some sets from V.
 Inner models, e.g. Gödel's constructible universe L.

How to show given sentence  $\varphi$  is independent of ZFC?

Assume ZFC is consistent, demonstrate that  $ZFC + \varphi$  is also consistent.

Given a model (universe of sets) V of ZFC, modify V so that it satisfies  $ZFC + \varphi$ .

Idea 1: Remove some sets from V.
 Inner models, e.g. Gödel's constructible universe L.

 Idea 2: Add some new sets. The method of *forcing*.

Given a universe of sets V, choose a set  $P \in V$ , pick a 'suitable' new  $G \subset P$ .

Given a universe of sets V, choose a set  $P \in V$ ,

pick a 'suitable' new  $G \subset P$ .

Try to build V[G], an extension of V containing G, satisfying ZFC.

V[G] is the collection of all sets definable from G over V.

Given a universe of sets *V*, choose a set  $P \in V$ , pick a 'suitable' new  $G \subset P$ . Try to build V[G], an extension of *V* containing *G*, satisfying ZFC. V[G] is the collection of all sets definable from *G* over *V*.

Issues:

- ▶ How to choose *G* so that *V*[*G*] satisfies ZFC?
- Control that a given sentence  $\varphi$  holds in V[G].

Given a universe of sets *V*, choose a set  $P \in V$ , pick a 'suitable' new  $G \subset P$ . Try to build V[G], an extension of *V* containing *G*, satisfying ZFC. V[G] is the collection of all sets definable from *G* over *V*.

Issues:

- ▶ How to choose *G* so that *V*[*G*] satisfies ZFC?
- Control that a given sentence  $\varphi$  holds in V[G].

#### Theorem (Cohen)

If P is a poset and G is a V-generic filter, then  $V[G] \models ZFC$ .

Given a universe of sets *V*, choose a set  $P \in V$ , pick a 'suitable' new  $G \subset P$ . Try to build V[G], an extension of *V* containing *G*, satisfying ZFC. V[G] is the collection of all sets definable from *G* over *V*.

Issues:

- ▶ How to choose *G* so that *V*[*G*] satisfies ZFC?
- Control that a given sentence  $\varphi$  holds in V[G].

Theorem (Cohen)

If P is a poset and G is a V-generic filter, then  $V[G] \models ZFC$ .

Theorem (Balcar-Vopěnka)

If  $V[G] \models \mathsf{ZFC}$ , then (essentially) P is a poset and G a V-generic filter.

▶  $(P, \leq)$  is a poset if  $\leq$  is a transitive, reflexive relation on *P*.  $a \leq b \land b \leq c \Rightarrow a \leq c$  and  $a \leq a$ .

If  $a \in P$  is an atom, then the associated principal filter  $F_a = \{ p \in P : p \ge a \}$  is V-generic.

Suppose  $(P, \leq) \in V$  is a poset. A filter  $G \subset P$  is V-generic if  $G \cap D \neq \emptyset$  for each dense  $D \subset P$ ,  $D \in V$ .

If  $a \in P$  is an atom, then the associated principal filter  $F_a = \{ p \in P : p \ge a \}$  is V-generic.

Claim

If P atomless, then there is no V-generic filter  $F \in V$ .

Suppose  $(P, \leq) \in V$  is a poset. A filter  $G \subset P$  is V-generic if  $G \cap D \neq \emptyset$  for each dense  $D \subset P$ ,  $D \in V$ .

If  $a \in P$  is an atom, then the associated principal filter  $F_a = \{ p \in P : p \ge a \}$  is V-generic.

#### Claim

If P atomless, then there is no V-generic filter  $F \in V$ .

#### Fact

We can assume that for every poset  $P \in V$  and  $p \in P$ there exists (not in V) a V-generic filter G such that  $p \in G$ .

Suppose  $(P, \leq) \in V$  is a poset. A filter  $G \subset P$  is V-generic if  $G \cap D \neq \emptyset$  for each dense  $D \subset P$ ,  $D \in V$ .

If  $a \in P$  is an atom, then the associated principal filter  $F_a = \{ p \in P : p \ge a \}$  is V-generic.

#### Claim

If P atomless, then there is no V-generic filter  $F \in V$ .

#### Fact

We can assume that for every poset  $P \in V$  and  $p \in P$ there exists (not in V) a V-generic filter G such that  $p \in G$ .

#### Theorem (Cohen)

If P is a poset and G is a V-generic filter, then  $V[G] \models ZFC$ .

Given sentence  $\varphi$ , we want to find *G* such that  $V[G] \models \varphi$ .

Assume  $b: \omega \to \omega_1^V$  in V[G], investigate  $\dot{b}$ .

$$\mathcal{D}_{\dot{b}(n)=\alpha} \perp \mathcal{D}_{\dot{b}(n)=\beta}$$
 for each  $n \in \omega$  and  $\alpha \neq \beta \in \omega_1$ .

Theorem *If P is c.c.c. and V*  $\models |\kappa| < |\lambda|$ *, then V*[*G*]  $\models |\kappa| < |\lambda|$ *.* 

#### Proof.

WLOG show that there is no surjection  $b: \omega \to \omega_1^V$  in V[G], other cases are analogous.

Assume  $b: \omega \to \omega_1^V$  in V[G], investigate  $\dot{b}$ .

$$\mathcal{D}_{\dot{b}(n)=\alpha} \perp \mathcal{D}_{\dot{b}(n)=\beta}$$
 for each  $n \in \omega$  and  $\alpha \neq \beta \in \omega_1$ .

Thus  $R_n = \{ \alpha : \mathcal{D}_{\dot{b}(n)=\alpha} \neq \emptyset \}$  is countable.

**Theorem** If *P* is c.c.c. and  $V \models |\kappa| < |\lambda|$ , then  $V[G] \models |\kappa| < |\lambda|$ .

#### Proof.

WLOG show that there is no surjection  $b: \omega \to \omega_1^V$  in V[G], other cases are analogous.

Assume  $b: \omega \to \omega_1^V$  in V[G], investigate  $\dot{b}$ .

$$\mathcal{D}_{\dot{b}(n)=\alpha} \perp \mathcal{D}_{\dot{b}(n)=\beta}$$
 for each  $n \in \omega$  and  $\alpha \neq \beta \in \omega_1$ .

Thus  $R_n = \{ \alpha : \mathcal{D}_{\dot{b}(n)=\alpha} \neq \emptyset \}$  is countable.

If 
$$\mathcal{D}_{\dot{b}(n)=\alpha} = \emptyset$$
, then  $V[G] \models b(n) \neq \alpha$ .  
I.e.  $b(n) \in R_n$ , and  $\operatorname{Rng}(b) \subset \bigcup \{ R_n : n \in \omega \}$ .  
 $\bigcup \{ R_n : n \in \omega \}$  is in V and countable, and b is not a surjection.

### $\Delta$ -system lemma

# Lemma Suppose $\gamma \in \text{On}$ , $\{a_{\alpha} : \alpha \in \omega_1\} \subset [\gamma]^{<\omega}$ . There exists $I \in [\omega_1]^{\omega_1}$ and $\Delta \in [\gamma]^{<\omega}$ such that $a_{\alpha} \cap a_{\beta} = \Delta$ for each $\alpha \neq \beta \in I$ .

### $\Delta$ -system lemma

#### Lemma

Suppose  $\gamma \in \text{On}$ ,  $\{a_{\alpha} : \alpha \in \omega_1\} \subset [\gamma]^{<\omega}$ . There exists  $I \in [\omega_1]^{\omega_1}$  and  $\Delta \in [\gamma]^{<\omega}$  such that  $a_{\alpha} \cap a_{\beta} = \Delta$  for each  $\alpha \neq \beta \in I$ . Moreover if  $\alpha < \beta$ ,  $\chi \in a_{\alpha} \setminus \Delta$ ,  $\xi \in a_{\beta} \setminus \Delta$ , then  $\chi < \xi$ .
